Hardwood Leaf Mold

Is known and used in every state of these United States of America. Its High Quality and Uniform Standard Makes it the Outstanding Humus on the Market Today!

Lucky Gardens' Hardwood Leaf Mold is taken from Virgin Timberlands, it is thoroughly decomposed, light, odorless, moisture holding bacteria stimulant, a soil conditioner of unusual properties, that does not deteriorate but holds its identity in the soil for years. Centuries old, its mellow softness gives your plants a chance to extend their root system, allowing drainage and aeration, making an effective and productive soil of fine texture. The absorbing qualities of Leaf Mold increases the solution of your commercial fertilizers, causing the fertilizer to become more effective and holding it in a moisture content that gives immediate and lasting results.

Leaf Mold is essential and necessary in any heavy soil to break up the lumpy character of this soil and to produce looseness, ventilation and drainage.

Leaf Mold used in a light sandy soil causes it to become less porous and increases its capacity for holding moisture, resulting in a black, retentive, and productive loam.

Lucky Gardens' Leaf Mold is especially recommended for your seed-beds, seedlings and propagating benches. Leaf Mold clings to the fine roots, preventing damage and making moving easy. Its superiority over sand and ashes and such, is, that it holds moisture, keeps a regulated temperature and saves labor in watering.

Pot Plant Growers are among the largest users of Leaf Mold. The nature of most pot plants require a loose perfect soil condition whereby the plants may extend their fibrous root system more freely; vigorous growth ensues; the plants become strong and healthy, the foliage taking on a deeper shade and the flowers a richer bloom.

Nurserymen are using Leaf Mold in large quantity lots. Their repeat orders and letters of complimentary nature, proves the Value of Leaf Mold in the Nursery. In the Nursery it is used for mulching, top-dressing, planting of trees, evergreens, shrubs, etc.

Landscapists are high in their praise of Lucky Gardens' Leaf Mold. Golf Courses, Private Estates, Parks and even Football Fields have been benefited by the use of our Leaf Mold.
